This PDF gives an overview of the performance of the PC algorithm on discrete models with faithfulness violations vs. discrete models without faithfulness violations. The following table summarizes the accuracy of PC skeleton search:

Average accuracy for models with faithfulness violations: 0.872
Average accuracy for models without faithfulness violations: 0.932

Model Size	Faithfulness Violation	Accuracy
3	True	0.667
3	True	0.667
4	True	0.833
